Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-42, drawn to a mechanical arm, classified in class 254, subclass 126.
- II. Claim 43, drawn to a method of maneuvering a mechanical arm, classified in class 254, subclass 1.

The inventions are distinct, each from the other because:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process can be practiced by another apparatus. For example, the process can be practiced by an apparatus that uses either a toggle linkage, a ratchet mechanism, or a pneumatic/hydraulic mechanism to drive the mechanical arm instead of a drive shaft having drive gears.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
